Tim - are you planning to send us results so we can discuss with EFED or are these so high it's mute?

I just got the lab report for our official sample at AltEn. There are no heavy metals of concern, only a 0.21 ppm hit on selenium, so that isn't the issue. The pesticides are all quite high, with clothianidin (neonic insecticide) topping the chart at 427,000 ppb. My calculation has a land application rate of 20 tons per acre resulting in 17 pounds of active ingredient per acre for that compound. The seed treatment labels indicate the annual maximum amount allowed at 0.165 pounds per acre.
